How to Make Glow in the Dark Sidewalk Chalk

Equipment

- Ice cube trays or other molds
- Bowl or container for mixing

Materials

- 1 cup Plaster of Paris
- 1/2 cup water
- 2 tbsp Glow-in-the-Dark Paint approximately
- Petroleum jelly or spray oil

Instructions

1. Mix the Plaster of Paris and water in a bowl.
2. Add a few squirts of the paint and mix.
3. Coat the inside of the molds with a very thin layer of petroleum jelly or oil.
4. Divide the mixture into the molds.
5. Let dry overnight.
6. Pop the chalk from the molds. (This might be easier if you stick it in the freezer for 15 or 20 minutes first.)
7. Activate the florescence by putting the chalk in the light before using.
8. Write on your sidewalk.

Notes

The bowl or container you use might get ruined, so something you are going to recycle is suggested.
